

## **ECOLOGICAL GARDEN & FARMSTEAD DESIGN**

Professional service offered by the Sun And Bloom Farms founders - Anna Maria & Lucian

### **CONSULT - DESIGN - INSTALL - CARE**

Our services transform landscapes into thriving, regenerative and sustainable ecosystems that:

- ❖ Conserve water, energy, resources and time
- ❖ Grow organic food, biodiversity, local habitat and beauty
- ❖ Inspire, Empower and Support individual, family and community wellbeing
- ❖ Improve local ecologies and address local social and environmental issues

We have over a decade of experience in providing our expertise to homeowners, community centers, schools, urban farms and family small scale diversified farms around the world.

### **CONSULTATION**

What we Do: We connect with you in person, learning about your needs, wants and vision for your project. We walk and analyze your space in need of transformation, and communicate the solutions that are possible in this space on the spot. This is a verbal assessment with recommendations and hand drawn sketches when/where appropriate.

What you Get: A follow up short report with summarized recommendations and additional resources for you to learn from further.

Fee: \$150/hour + travel (\$0.50/mile) (2 to 3 hours minimum for properties over 1 acre)

### **DESIGN & IMPLEMENTATION PLAN**

What we Do: The process is similar to the consultation, only that we dive deeper into your vision and your existing context, and we take a more detailed look at your space. Depending on the size and scope of your project we may need to communicate with you back and forth, and observe your landscape, a few times enduring the design process. We take all that information and observations and create a conceptual landscape design and written design report.

What you Get: Our conceptual landscape designs include a 2-dimensional, birds eye basemap view of the transformed space with all the recommended elements, such as trees, garden beds, paths, rain tanks, green house and the likes, added and marked. The written assessment on the recommendations accompanies the design. The written assessment includes: details on each of the elements of the design, such as on the plants and materials recommended; a phased implementation plan; a maintenance plan; and estimated costs for full implementation. If the design is for an income producing landscape, such as a small farm, and if the client desires, we write up a basic business blueprint plan also.

Fee (under 1 acre): \$2,000 to \$5,000 (depends on complexity)

Fee (from 1 to 10+ acres): \$3,000 to \$12,000 (depends on complexity)

### **INSTALL PROJECT MANAGEMENT & GARDEN CARE**

What we Do: We work with licensed contractors to install your project. At this time we will offer these services only if you have the contractor yourself or with our own starting later in 2024

# “SAMPLE” ECOLOGICAL OASIS - REPORT & PLAN

WATER CONSERVATION - FOOD PRODUCTION - BIODIVERSITY & HABITAT
